

Client:
Fi-Med

Location:
Wauwatosa, WI

Project Type:
Corporate Office Expansion

Fi-Med

Requirements:

Fi-Med, a Future-50 medical billings company, needed to expand its office space and accommodate a growing number of employees while not sacrificing the size and efficiency of their individual work areas.

Recommendations:

After completing an installation of Teknion ie in the company's reception area, Schroeder Solutions was called upon to utilize this product in the expansion of the Fi-Med facility. Due to the 120-degree planning capabilities of this product, the design team was able to maximize the space while maintaining an open appeal. The installation of Teknion ie allowed the design team to double the capacity of the expanded office space while providing efficient work areas that better support the task orientation of the employees. The selected furniture and finishes throughout this expansion project follow the design standards of Fi-Med. Schroeder Solutions continues to use these standards in a variety of work areas in this rapidly growing company.

Product Showcase:

- Programming, space planning, finish selection and specification
- Teknion ie workstations
- Global seating
- Furniture installation

Results:

"We are extremely pleased to have found and partnered with a fellow Future 50 company like Schroeder Solutions. Their ability to lead us through the project and complete it tastefully, and with no surprises, was greatly appreciated!"
– Rosa Rodriguez, IT & Imaging Manager/Project Coordinator
