

CG SCHMIDT/ ADVANCED HEALTHCARE

REQUIREMENTS

Advanced Healthcare needed a raised floor in the MRI unit viewing room, as well as the Magnet and Control room because the wiring had to be run under the floor. In order to complete the project, the General Contractor, CG Schmidt, needed to find a vendor partner to furnish and install the raised floor for Advanced Healthcare.

RECOMMENDATIONS

Schroeder Solutions was hired by the General Contractor, CG Schmidt, to provide the solutions for this application. Before the project began, we made sure to contact the manufacturer of the MRI unit so that we could specify the type of flooring that would provide adequate load-bearing capabilities. Schroeder Solutions then installed a raised floor, by cutting around the cooling tubes and electrical. Through the duration of the project we worked side by side with the manufacturer of the MRI system. The cooperation with the manufacturer gave Schroeder Solutions the ability to complete the project to the satisfaction of CG Schmidt.
