

MASTER LOCK/ ROMAN ELECTRIC

REQUIREMENTS

Master Lock hired Roman Electric to provide a variety of products and services in their new Oak Creek facility. Roman Electric then partnered with Schroeder Solutions to install a raised floor theater application. In total, there were four computer related rooms that needed this type of flooring system. It was Master Lock's goal to manage all of their mechanicals underneath this system.

RECOMMENDATIONS

We supplied two types of raised flooring systems to provide the proper dead load weight requirements for Master Lock's computer room, computer control room, phone room and training room. In the training room, Schroeder Solutions used a concrete filled steel raised flooring system which was custom cut into a 37' arc. For accuracy we set up and cut the training room floor in our warehouse, disassembled it and re-installed it in their training room. For the other three rooms Schroeder Solutions installed a concrete filled steel panel system with a laminate finished floor material which fits into a basket grid. Perforated air flow panels were then installed to allow adequate air flow for the equipment in these rooms. We also included an ADA ramp and hand rail system which are ASM products.

- Installation

RESULTS

"Roman Electric values their partnership with Schroeder Solutions who helps us create raised floor solutions for our customers. The Master Lock project was handled professionally within the schedule and budget determined by us. We look forward to working with Schroeder Solutions in the future."
