

Client:
Zywave

Location:
Wauwatosa, WI

Project Type:
New Corporate Office Design
and Relocation

Zywave

Requirements:

Zywave, a healthcare software company, was in need of a new office space. After reconfiguring an old building and existing in an office space with employees located on five floors, they were ready to consolidate their staff onto one level of a new building.

Recommendations:

Due to their past project experience, Zywave called upon Schroeder Solutions to work in conjunction with a local architect to address their new office space. Schroeder provided move coordination services and created the general office layout. The Schroeder Solutions' design team worked around distinct architectural features and column placements to maximize the open office area. Using Teknion Leverage they were able to create an efficient 125-workstation space plan with access to ample natural light. In order to provide individuals with a greater sense of personal space and comfort, ergonomic features such as adjustable height keyboard corner worksurfaces were incorporated into the work area design. Part of the challenge of this project involved the move coordination. Schroeder was able to coordinate the move of over 180 people in one weekend.

Product Showcase:

- Space planning and furniture specifications
- Teknion products: Leverage workstations
- Milliken modular floor covering
- Project management
- Furniture installation
- Corporate relocation

Results:

"Thanks for all your help and kudos to your teams regarding the entire project! This place looks great and the move itself went very smoothly."

– Dean Koenig, Senior Vice President/CFO
